The rise of the CAD software as an application that changed the way engineering was done, was due to a combination of technologies: the minicomputer, as the infrastructure on which CAD software could run; and the graphics screen, which became the user interface. The term CAD (Computer-Aided Design) was invented by John Scott, the vice president of product development at Silicon Graphics (SGI). He is credited for suggesting the term CAD for the development of a computer based application to produce engineering drawings. Autodesk has always been a leader in the CAD industry and have released the first CAD software in 1977 for the SST 650/770 and 1984 for the IL c9000/c8000 minicomputers and the Intel 80186 microprocessor.
